

ProcessIt 8.3

Making excellent *even better*

Teamwork Solutions is excited to introduce ProcessIt 8.3, the next level of workflow flexibility. Packed with features requested by our ever-growing customer-base, this release is guaranteed to deliver immediate value for existing applications - and terrific opportunities for new ones.

Targeted at decreasing the need for customizing core design elements, 8.3 delivers too many changes to be itemized on one page. Below are a handful of the powerful new, configurable features included in this release. For full release details, please request a copy of the release notes.

- Supercharge your existing infrastructure by maximizing productivity, standardization and agility.
- Architecture and features that promote industry best practices.
- Deploy your applications across multiple client types: Lotus Notes, browsers and Blackberry/PDA's.

ProcessIt 8.3 Key New Features

Proxy Approvers	Users can now designate temporary approvers on their behalf while they are unavailable (i.e. on vacation) by creating Proxy Approver documents to designate their proxy for specific dates and workflows.
Approve with Comments	For workflow steps with "Approve" as an action option, administrators now also have the option to show an 'Approve with comments' button to prompt users to enter comments into the document history.
Escalation Options	To further expand escalation, the escalation function now allows for additional notifications identified by name, group, and by mapped fields in the workflow document. We've also added the ability to move the workflow to a different step after reaching a specified number of escalations.
More Options on Mobile Devices	Mobile device actions now include all non-administrative actions – and a special iPhone option to launch into the full browser interface. In addition, in-step validation is executed on mobile devices.
Exports	An export prompt has been added to all the views to allow users to export data directly to Excel. Export definitions can be set up by users by simply filling out a form and selecting fields to be exported. Also new is the ability to export the time spent in each step to an Excel spreadsheet.
Platform(s)	Compatible with Lotus Notes client R7+ and Domino server 7.0.2 and above. Operating system, browser, and device agnostic.

To learn more about ProcessIt 8.3, our bundled upgrade packages, or to schedule a demonstration of the new features, please contact Steve McIntosh at 614-884-4280 or smcintosh@processitsoftware.com.
